DETAILED ACTION

Examiner thanks the applicant for providing reference numerals to the structural elements in the claims.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 and 4-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Uchida et al (US 6,000,122).

Uchida discloses a frame (20 shown in Fig. 1 is a part of the apparatus shown in Fig. 3), a tool head (21), a retractable vacuum tube (28), a grasping assembly (20), a busing (24), a collet ²⁹ (22), 25 and 20 are moved along X- and Y-directions to pick up electronic components 10 (IC components because of leads on them) from 4 and place the picked up electronic components to PCB 3.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Uchida et al (US 6,000,122) in view of Lee (US 6,631,556).

Art Unit: 3729

Uchida fails to disclose a knob.

Lee discloses a knob (184).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Uchida by providing a knob, as taught by Lee, for the purpose of manually lifting and rotating to properly align the grasping assembly with the IC package.
